Introduction

My internship recruitment portal project is a platform that connects job seekers with employers. It is designed to make the job search process easier and more efficient for both parties.

The project was born out of our personal experience as a internship seeker. We realized that there was a need for a platform that could streamline the job search process and provide job seekers with access to a wider range of job opportunities.

Technologies Used

Unique Features

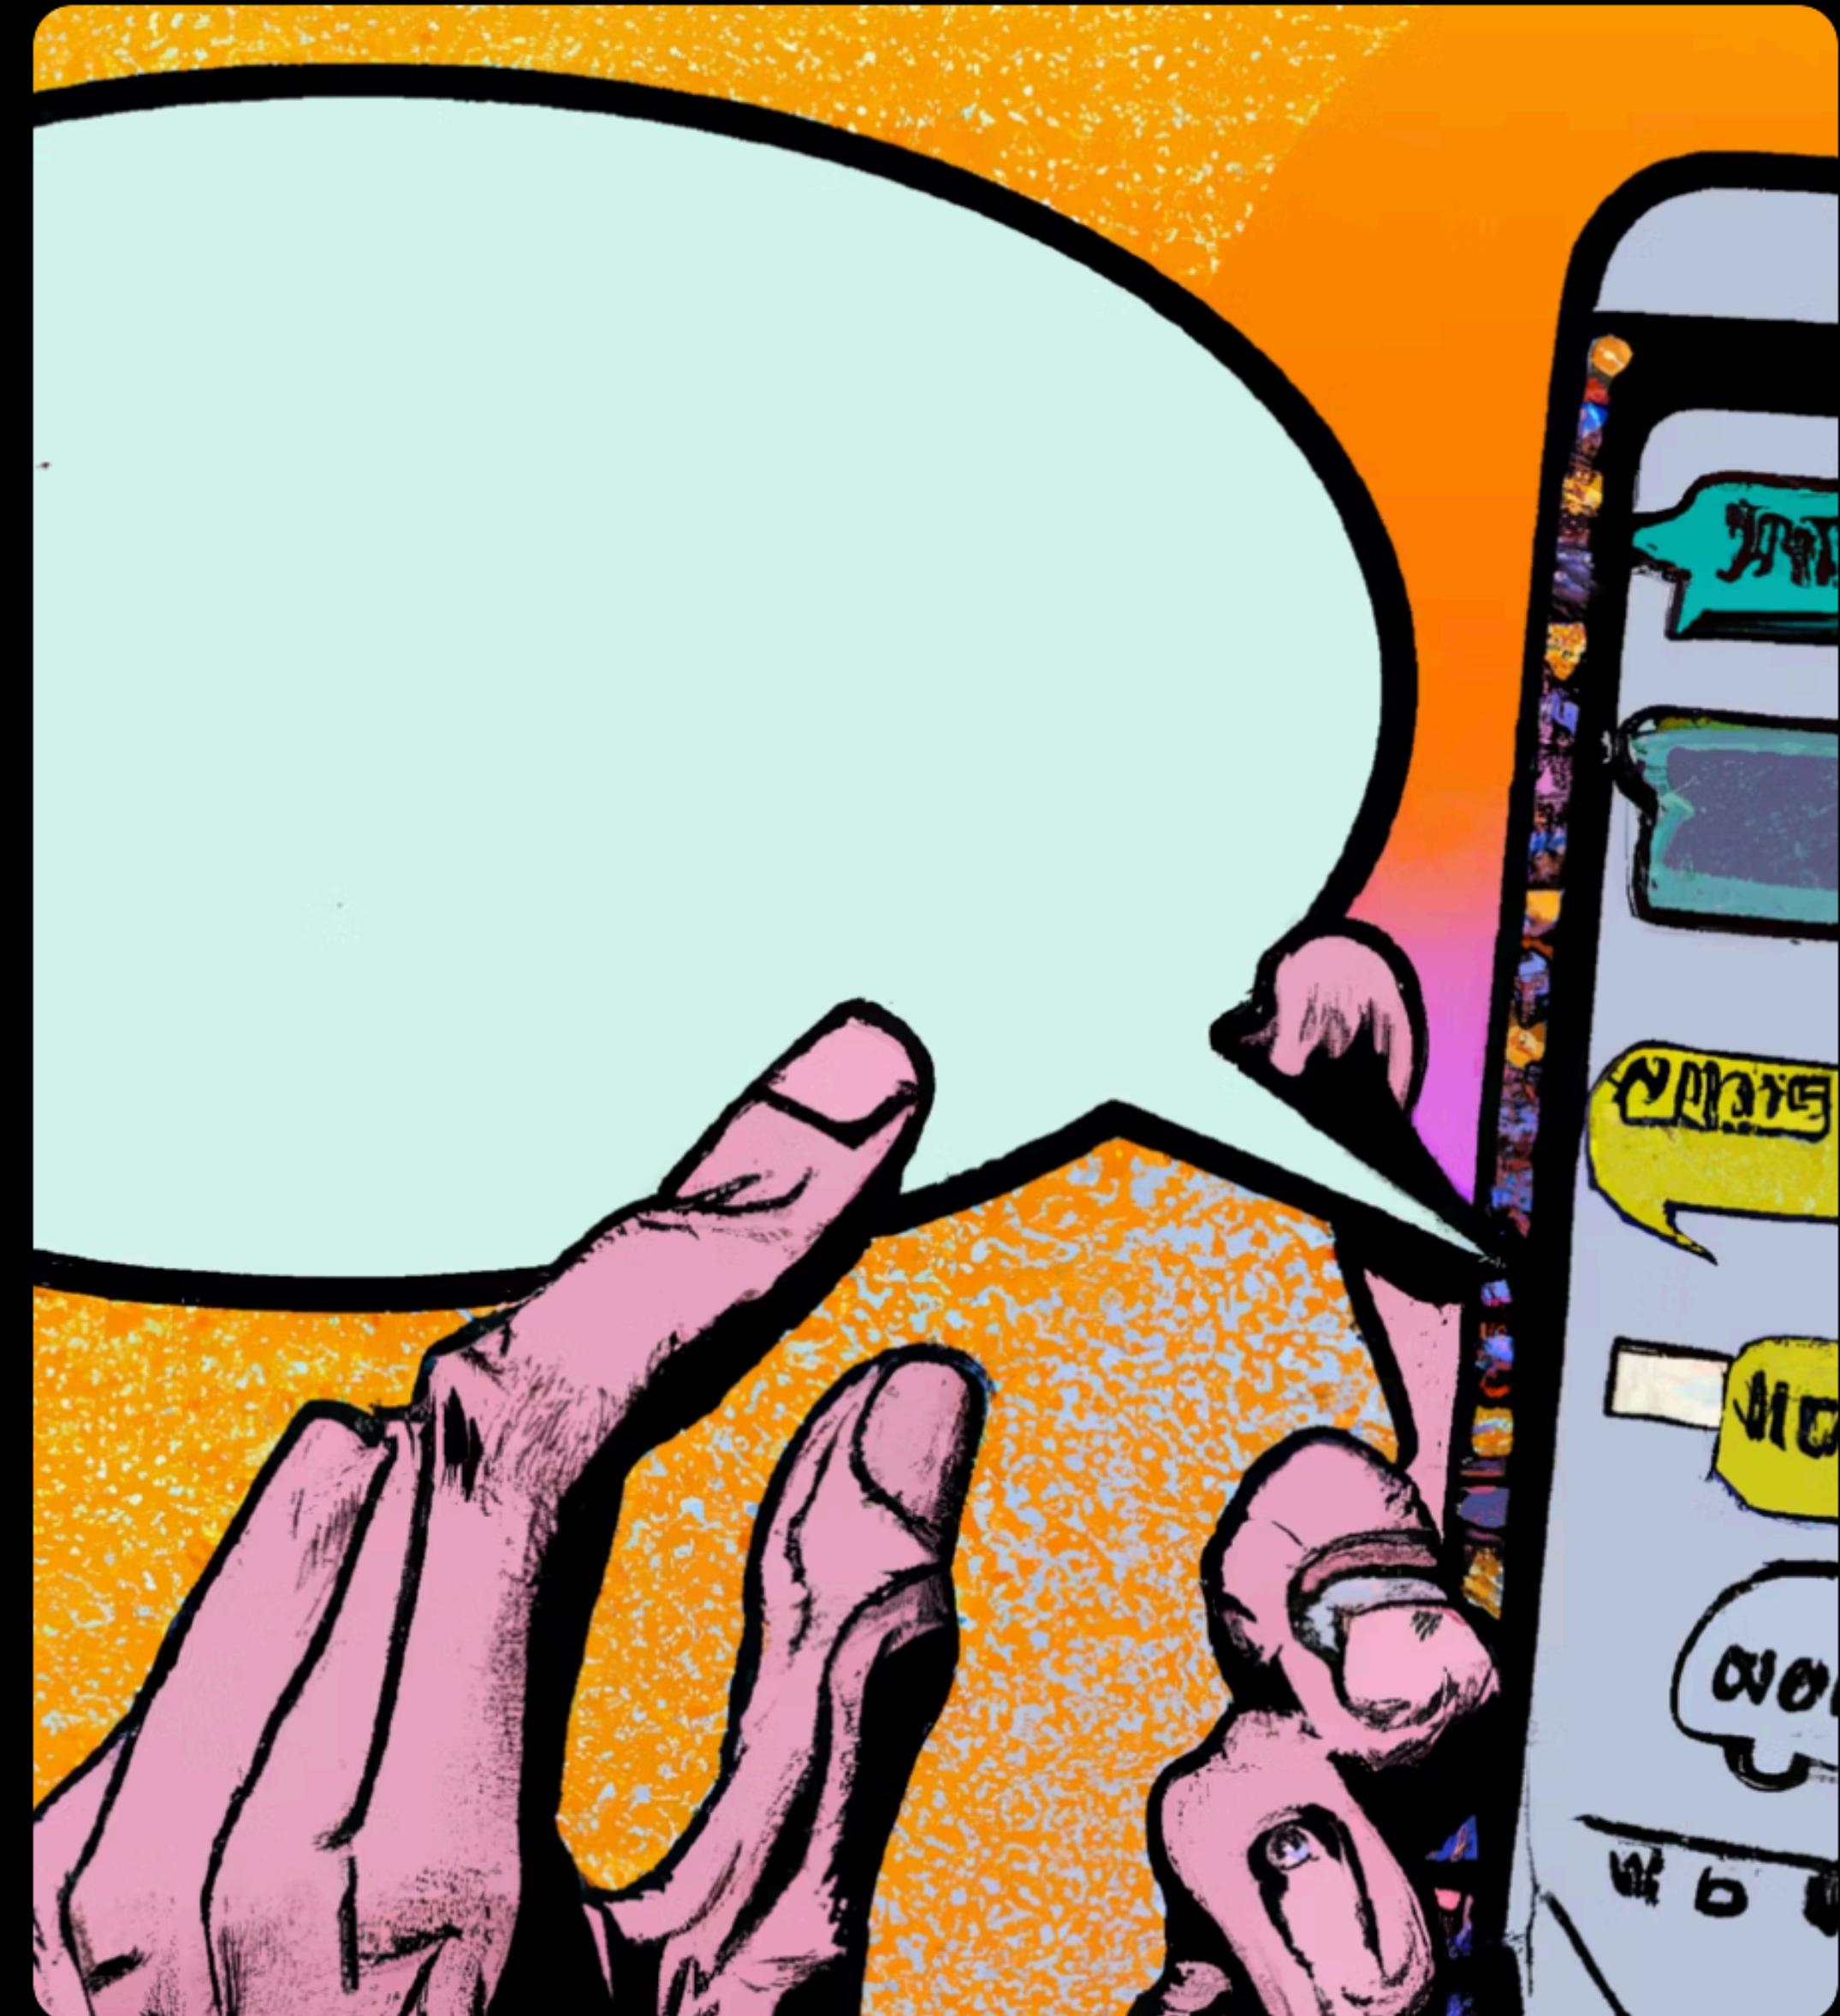

1. Personalize Filtering
2. Blogs
3. Resume Builder
4. NewsLetter
5. Contact Recruiter
6. ChatBot (In Progress)

Design

The design of the application will be clean and user-friendly, with a focus on simplicity and ease of use.

The interface will be customizable, allowing users to choose from different color schemes and layout options to suit their preferences and needs.

Target Audience

The target audience for our internship recruitment platform, Recruitex, would be students and recent graduates who are seeking internship opportunities to gain valuable work experience and advance their careers. Additionally, the platform would also be targeted towards companies who are looking to hire interns and want to streamline their recruitment process. Recruitex can help both students and companies save time and effort in finding and applying for internships, and in finding the best candidates for internship positions, respectively.

Future Plans

1. ChatBot
2. OAuth using LinkedIn
3. Integrating HashNode
